

Xavier University of Louisiana College of Pharmacy

Postgraduate Year One Residency Program

Required Rotations 2011-2012

Jefferson Community Healthcare Center, Inc.

Clinical pharmacy services inclusive of, but not limited to, the following disease state management services: diabetes education and management, hypertension education and management, cholesterol education and management, and obesity education.

Xavier University Health & Wellness Center

Pharmacist-directed, freestanding health center. Services include diabetes education and management.

Interim LSU Public Hospital- Coumadin Clinic -

Free-standing outpatient treatment facility providing warfarin therapy management services including but not limited to, protocol based dosing adjustments and patient education.

Tulane Community Health Clinic at Covenant House

Tulane Community Health Clinic at Covenant House provides primary care to those with limited access. They also have extensive behavioral health services and provide social services as well. The clinic aims to provide health care as part of a medical home involving physicians, a nurse practitioner, a clinical pharmacist, medical assistants, and community health workers. The clinical pharmacy service provides medication titration, nutrition counseling, smoking cessation counseling, and health maintenance services for patients with uncontrolled diabetes and hypertension. In addition to direct patient interaction, a telemedicine clinic monitors patients with uncontrolled diabetes needing more intense counseling.

Internal Medicine : Clinical pharmacy services include: participation in daily rounds with Internal Medicine Team, which involves round table discussions, and seeing & following patients on service; providing complete pharmaceutical care to the team by assessing, monitoring, and recommending appropriate medication therapy to our patients based on available medical evidence; providing pharmacokinetic dosing, monitoring of toxicities, reporting ADRs, providing medication counseling, communicating information to other healthcare providers (physicians, pharmacists, nurses, and other ancillary members) as necessary, and participating in ongoing Drug Utilization Reviews (DUEs); and providing drug information education.

Elective Rotations 2011-2012

Xavier/Rite Aid Pharmacy Care Center

Pharmacist-directed disease state management center in a community/retail setting. Target disease states for MTMS services include but are not limited to diabetes and cardiovascular disease. This practice site has a large community service component the majority of which is currently conducted at a local assisted living facility and senior centers

Tulane-Xavier Drug Information Center

The Xavier University of Louisiana College of Pharmacy Drug Information Center is affiliated with Tulane University Hospital and Clinic and is established to provide accurate, current, and unbiased drug information services to area health care practitioners

Xavier University of Louisiana College of Pharmacy

Postgraduate Year One Residency Program

Elective Rotations 2011-2012 Continued

Interim LSU Public Hospital - HIV HOP Clinic

Consultant clinical pharmacy services in HIV/AIDS care to providers and patients on an on-going basis. Practice involves patient and provider education, individual and group clinical consultations, telemedicine series to providers, individual and group traineeships, development of clinical materials in response to questions and hands-on problem-solving with medication-related issues in the complex process of HIV/AIDS disease management.

Ochsner Clinic Foundation Asthma Education Center

The Asthma Education Center is a service that provides asthma education, instruction on proper use of asthma devices, and peak flow monitoring to patients. Our goals include enhancing asthma care, patient knowledge, and patient satisfaction with care through collaboration with physicians, pharmacists, patients, and families. Residents will aid the provider in developing asthma action plans, educating patient on asthma, and teaching proper use of asthma devices such as spacer and peak flow meters. Residents will also be exposed to other conditions seen in clinic, including rhinitis, chronic urticaria, chronic cough, and drug and food allergy.

Tulane University Hospital Clinic

The clinic provides primary care for HIV-infected patients; consult services for infectious diseases, and infectious disease clearance for renal and liver transplant patients infected with HIV. The resident will be working with the preceptor and other healthcare professionals (physicians and nurses) to provide services to the clinic patients. In addition, the resident will be responsible for identifying, preventing and resolving medication therapy issues as well as providing medication/adherence counseling for patients infected with HIV, and serving as a drug information resource.

Multi Practice Clinic

The Multipractice Clinic is a federal qualified health care facility where we having a Multi-disciplinary health care team provides clinical pharmacy services in the area of diabetes education and management in individual and group settings, hypertension education and management, and hyperlipidemia education and management.

Daughters of Charity Services New Orleans

The clinical pharmacy services provided include patient counseling, preventative services, drug information services, medication reconciliation, disease state management, medication monitoring, and provider consultation. The primary focus of these services includes the interdisciplinary management of cardiovascular diseases, such as anticoagulation and dyslipidemia. The services are provided in a community healthcare center that operates based on the medical home model. Additionally, a 340 B outpatient pharmacy, mobile unit, dental clinic, and behavioral health professionals are located on-site to enhance the availability of the services provided.

Elective Sites 2011-2012 Continued

Interim LSU Public Hospital - Internal Medicine

Clinical pharmacy services include: participation in daily rounds with Internal Medicine Team, which involves round table discussions, and seeing & following patients on service; providing complete pharmaceutical care to the team by assessing, monitoring, and recommending appropriate medication therapy to our patients based on available medical evidence; providing pharmacokinetic dosing, monitoring of toxicities, reporting ADRs, providing medication counseling, communicating information to other healthcare providers (physicians, pharmacists, nurses, and other ancillary members) as necessary, and participating in ongoing Drug Utilization Reviews (DUEs); and providing drug information education.

Interim LSU Public Hospital - Emergency Medicine

During this core rotation learning experience, the resident will spend 6 weeks at the LSU Interim Health Sciences Trauma I Center emergency room in critical and non-critical areas (i.e. Pelican and Gulf pods). The practice environment in the ED Critical will require moment-to-moment interactions with the ED attending staff (Consultants), ED Residents (and rotating non-ED house staff), mid-level practitioners, nursing staff, pharmacy staff and other healthcare professionals in the work-up of drug-related problems and in optimizing pharmacotherapy for all ED. Critical patients. In addition to monitoring and consulting on emergency pharmacologic issues in medical and trauma patients, the resident will participate in all ED Pharmacy Practice model activities including active roles in response Code Blue, Level 1 Trauma resuscitations, Stroke Team activities, ED Sepsis Response and patients undergoing Procedural Sedation. The resident will also provide information education to nursing, pharmacy, physician staff and patients/ family members. Documentation of pharmacy related interventions and activities will be done in Quantifi and Cliq™ (as appropriate).

Children's Hospital of New Orleans- Pediatric Critical Care-

Residents will have the experience of providing pharmaceutical care to patients in the Pediatric Intensive Care Unit including but not limited to pharmacokinetics, nutrition, infectious diseases, sedation, and cardiology. As part of a multi-disciplinary team, residents will be responsible for ongoing team education and patient management.

East Jefferson General Hospital- Inpatient Oncology-

Clinical pharmacy services provided inclusive of, but not limited to, medication therapy management (MTM) of hematology/oncology patients.
